ABSTRACTED-PUB-NO: KR 2002044919 A

BASIC-ABSTRACT:

NOVELTY - A method for providing an open type question/answer service
using the
Internet is provided to make a respondent spontaneously respond to a
question
of a questioner and to secure the reliability of the answer by making
a
plurality of viewer evaluate the answer of the respondent.

DESCRIPTION - The method for providing the open type question/answer
service
comprises the steps of providing a menu capable of selecting a
category and
importance of the question and receiving the question of the
questioner in case

that the questioner connects to the server, providing a question list of the
questioner together with the importance and display time of the question to the
respondent in case that the respondent connects to the server, and transferring
the answer to the questioner, and storing and opening the response file in case
that the respondent responds to the question. In case that the viewer connects
to the server, the question list, an answer list of the respondent and a menu
evaluating the answer are provided to the viewer. The evaluation information
of the viewer is stored in an evaluation file(S57) and the view frequency is
stored in a reference frequency file(S55) when the viewer reads the answer(S54).
